

**Verbal-Eyes™** is a unique new communication system, enabling patients who are unable to speak to communicate with others. Verbal-Eyes™ can be used in the hospital, alternate care facilities, and in the home. Verbal-Eyes™ is perfect for intubated or tracheostomy patients.

• Ventilator Assessment	• Respiratory Care
• Pulmonary Function Instruction	• Intensive Care Unit
• Patient Assessment Capability	• Emergency Department
• Bilingual Capability	• Recovery Room

### Easy To Use

- The patient must be able to see and to operate a touch screen computer. The patient “touch’s the screen” and they are communicating, fast and easy. No more flash cards! No more note-writing with pen and paper! No more lip-reading! **No more frustration!** It’s fast, easy and effective!
- Verbal-Eyes™ is menu driven. Each menu has a scrolling list of phrases applicable to that menu selection. The “Who,” “What,” “When” “Where,” “Why” menu has phrases such as, “What time is it?”, “Who are you?”, “What is wrong with me?”, and “When can I go home?” etc.
- Verbal-Eyes™ enables the patient to be able to communicate his pain level, whether he is too hot or cold, thirsty or hungry, or degree of breathing difficulty or if he is frightened to the healthcare provider

### English to Spanish and *visa versa*:

- Verbal-Eyes™ is perfect for enabling the Spanish-speaking patient to communicate his needs or concerns to the healthcare staff. The patient will see phrases listed in Spanish but when he clicks on the phrase, it will be displayed in English for the healthcare provider to see. The healthcare provider will click on questions or phrases displayed in English, which will then be displayed in Spanish for the patient to read.

### Benefits:

- **Cost Effective Patient Communication System:** Verbal-Eyes™ is the cost-effective answer to the communication needs of mechanically ventilated patients and/or for the non-English-speaking Hispanic patients. Verbal-Eyes has applications in hospitals, physician’s offices, long term care facilities, rehabilitation hospitals, nursing home and home care settings.

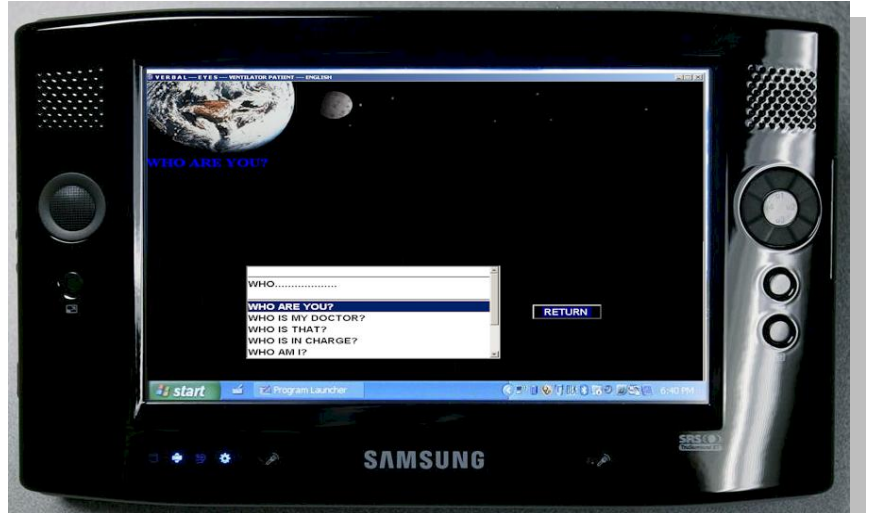

➤ **Improve Patient Communication, Outcome and Staff Satisfaction**

Verbal-Eyes™ is sure to help improve patient and staff satisfaction, and could have a positive effect on patient outcome. Verbal-Eyes is intended for use in the health care facility setting or in the patient's home and is ideal for intubated or tracheostomy patients, or those who do not speak English.

➤ **Enhances Patient Care**

Verbal-Eyes™ is a superb adjunct to a comprehensive Risk Management program, helping health care providers meets the requirements of Title VI. In a recent lawsuit filed by a deaf patient against a Utah hospital, the plaintiff won his case based on the Americans with Disabilities Act (ADA). The U.S. Justice Department ruled that the hospital was negligent in not providing a method of communication for the patient. The suit cost the hospital \$130,000.00. The hospital was ordered to provide communication devices or sign language interpreters.

➤ **Clinical Communication Support Information:**

A recent research article published in Respiratory Care (Volume 45, Number 12, December 2000, pp. 1460-1464) supports the use of systems that improve communication for mechanically ventilated patients. In this article entitled, **“Dyspnea in the Ventilated Patient: A Call for Patient-Centered Mechanical Ventilation”**, Dr. Hansen-Flaschen points out that many endotracheally intubated patients could communicate the severity of their dyspnea (difficulty breathing) if they were able to convey it to the caregiver. He points out that, **“other studies demonstrate that dyspnea is common during mechanical ventilation.”** Dr. Hansen-Flaschen suggests that, **“respiratory therapists can help usher in a new era of ‘patient-centered mechanical ventilation’ ”** and, he calls patient comfort by this approach, **“a new parameter for routine adjustment of ventilator settings in the management of respiratory failure.”**

### “Ushering in the new era of Patient-Centered Communication”

**Ordering Information:**

Product Number: VE 30-10-10    Price: \$2995.00 USD  
 Terms: FOB Dallas, TX

- Option A: 100% with P.O.
- Option B: 50% with P.O. - Balance Net 30

**Verbal-Eyes™ Menu Options:**

- Standard menus
- Free custom menus with initial order
- Custom menu update packages

**Verbal-Eyes™ Product Specifications**

- Windows XP Tablet PC Edition OS
- Integrated touch panel
- WiFi and Bluetooth-enabled
- Warranty: 1 Year
- Extended Warranty Available
- Specifications subject to change

**Verbal-Eyes™ Distributor**

**Advanced Pharmacy and Respiratory Care Solutions**  
 26611 Cabot Road – Laguna Hills, CA 92653  
 Office: 800-464-7736
